

BreeZZy Cloud

BreeZZy Cloud™ open cell memory foam combines the finest properties of softness and resiliency to create a superior high density sleep foam. It promotes air flow and relieves pressure.

The open cell technology of **BreeZZy Cloud™** is as joyous as laying on millions of tiny little air balloons, providing you with long term contouring and support. This technology helps it to conform to every curve of the body by responding to individual body weight and temperature, creating a more comfortable sleep experience.

"Like sleeping on a cloud"

It's the perfect choice for use in mattresses, pillows and a wide range of furniture applications. With advanced foam technology, **BreeZZy Cloud™** ensures an even pressure distribution; better than any other foam available in its class.

Open cell memory foam is also considered more durable than closed cell memory foam. **BreeZZy Cloud™** contains engineered recovery characteristics that ensures it returns to its original shape every time, helping you to build a better, longer lasting mattress, piece of furniture or pillow.

Total Comfort & Total Support.

VPC Group Inc. Superior "Open Cell" high density memory foam
